YEARS

Tefal®
COOKING PRECISION

THERMO SIGNAL

Get perfect searing results with patented Thermo Signal technology, a smart temperature indicator that turns dark red when ideal cooking temperature is reached.

TITANIUM NON-STICK

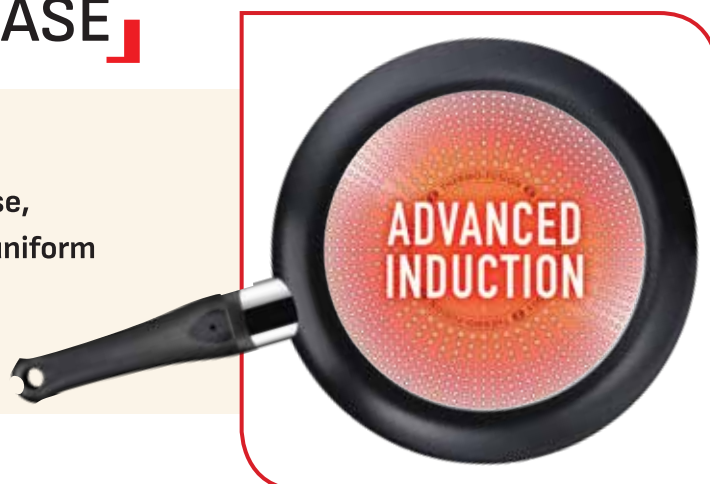

- ALUMINIUM BASE
- FIRST PRIMARY LAYER Highly densified for EXTREME RESISTANCE TO CORROSION
- SECOND PRIMARY LAYER Hardened layer to WITHSTAND ABRASION
- TOP COAT LAYER Titanium infused layer for COATING PROTECTION
- FINISH LAYER Extra-thick non-stick layer for PERFECT GLIDE

Tefal coatings provide durable non-stick performance to prevent ingredients from sticking to the pan and preserve the texture.

THERMO FUSION BASE

With extra-large grid and extra-thick base, Thermo Fusion base ensures faster and uniform heat distribution for even cooking.

Tefal has chosen a PFAS called PTFE as one of the basic materials used in the formulation of its non-stick coatings, because PTFE has exceptional non-stick properties. Public health authorities in Europe and the United States have demonstrated that PTFE is an inert substance that has no effect on the human body when ingested. These same authorities have confirmed that PTFE coatings do not pose a health risk when used in cookware. Please refer to the explanations given on the Tefal website of your country and refer to the list of studies given in the end of the Q&A. Our ceramic coatings, by their chemical nature, do not contain PFAS.
